1. Winter average based on November through April usage is calculated on all commercial water users.
2. Total water usage appearing on May through October bills is calculated at the standard rate and appears on the statement as WATER.
3. All usage above the winter average is then billed by the number of gallons multiplied by the difference between the standard rate and the excess rate and appears on the statement as SUMMER EXCESS.

EXAMPLE:

Winter Average - June usage = 35
WATER: 35 X \$2.01 = \$70.35
