

City of Glendale Policy for International Energy Conservation Code Compliance

Effective December 1, 2012, it shall be the city of Glendale's policy that proof of compliance with the adopted International Energy Conservation Code shall be accomplished by the specific architect/engineer/designer of record (Mechanical, Electrical, or Architect) providing documentation that the design and installation meet the specific requirements of their respective disciplines as outlined in the Code.

This may be accomplished by the architect/engineer of record or their assigned third party qualified agency.

The city of Glendale will issue "Special Inspection Certificates" for each discipline at the plan review stage. These certificates will outline what is needed from the owner and the architect/engineer. These certificates will need to be completed before a permit can be issued and then submitted to the city of Glendale when the project is complete.
